Art Unit: 2833

1. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: Page 3, lines 10-12, the phrase "a lock canceler ... projection"; lines 17-19, the phrase "it is possible to prevent ... careless" and page 6, lines 5-7, the phrase "the locking member ... retainer 11" are confusing and unclear since the terminology used in these phrases are not standard.
2. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 7, it is unclear how the retainer could retain the engagement detector at the first position. Claims 2, features are unclear since the terms "a lock canceler", "to cancel" are confusing. Claim 3 features are not understood. Claim 7 features are unclear as to how the lock canceler can be formed with a stopper.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

4. (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
5. Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Plyler.

Art Unit: 2833

Insofar as the claims can be understood due to the indefiniteness above, the disclosure of Plyler shows a complete response to each and every element set forth in these claims. For example: Figs. 1-6 show a first housing 13 with a projection 151, a second housing 11 having a retainer 53 and an engagement detector 81 being slidable in a first position as shown in Fig. 4 and a second position as shown in Fig. 6.

As to claim 2, a lock canceler 49.

As to claim 4, a cover 35.

As to claim 5, a notch 55.

As to claim 6, an inner surface of the cover 35 read as recited stopper.

As to claim 7, a base 95 read as the recited stopper.

6. Kunkle et al, Pederson et al, Saba et al, Dietz et al and Kouda et al are cited for disclosure of electrical connectors having assurance devices.
